

There are ^{many} people of all ages from school children to retired senior citizens throughout the country who are engaged in the building and flying of radio controlled model aircraft. The joys and benefits that this sport/hobby gives to our country goes far beyond merely providing a pastime to a handful of hobbyists. There are many clubs for example which provide a great deal of encouragement to youth to become pilots, astronauts, scientists, engineers, and technicians.

As a member of the Academy of Model Aeronautics (AMA), we operate under a very strict self imposed set of safety rules. One of these is related to the

maintenance of radios in an interference free environment. By allowing transmitters of relatively high power to operate at frequencies dangerously close to those used in our activities, the acceptance of this proposal would lead to interference which would create a danger to model aircraft and the participants and spectators who engage in this activity. We urge you to vote against this proposal.

Yours truly,

Pete B. Levelet

FCC Nprm PR Docket
92-235

United States House of Representatives
Washington DC 20515

Hello, my name is Jeff Schaffer, I am 29, married with one daughter. For many years I have built and flown radio controlled model airplanes. I have a very large amount of time and money invested in this equipment. I am pleading for your help to try to protect

of you or your families hobbies, E.g. Golf
Fishing, Hiking, Skiing etc. Currently there are

DEAR REP. PETRIE

I am opposed to proposed rule
PR DOCKET 92-235.

I am retired and derive 12 hours
of pleasure for each flying radio controlled
model airplane and untold hours
building them.

I own 7 RC Transmitter and 10
REC'RS.

The proposed new frequencies will
cause a hazard to safety.

Sincerely

James W. Austin

2-15-93

Dear Mr. Perri:

I am writing in regard to the FCC rule change proposal PR Docker 92-235.

I have been flying model planes since 1988. I have quite a bit of money invested in radios to control my models. In 1991 the FCC made us have all of our radios "retuned to a narrower band." This was supposed to be the final solution. If this new rule change is enacted a lot of the equipment I just had modified to meet new safety standards would be worthless.

I would like but cannot afford a real plane. Model planes are my only way to enjoy flying. Please think of us flying modelers when you vote.

Sincerely,

John O'Connell

The Honorable Tomas E Petri

Sir;

FCC action - NPRM PR Docket 92-235 will seriously affect the present status of the Radio Control Hobby by reducing the usable frequencies allotted to it due to serious safety concerns.

This could drastically reduce the present and potential sales of equipment in my and other similar shops across the United States.

Please consider opposing this legislation enactment!

Sincerely

Gerry Reinhard

To the Honorable Tom Petri:

with interference. If the new rule (PR Docket 92-235 Part 88) is adopted, frequency spacing on some of the channels will be only 2.5 kHz. This is not enough and will be unsafe.

Please help me and my fellow modelers and the whole industry to continue the safe enjoyment of our hobby and pastime.
